

## DATA SHEET

## Micro HDX Device for Concero Workspaces

For virtually no additional cost you can replace your legacy office PCs with the latest plug-and-play, Raspberry PI 3 powered micro devices. These solid state micro devices are loaded with a secure linux OS and the latest HDX workspace acceleration technology from Citrix. For a fraction of the cost of a PC, these devices can deliver a seamless desktop experience to end users with screen resolutions up to 1920 x 1200 and even supports HD video.

The Micro HDX Device attaches to the back of your monitor using a standard VESA mount and connects directly to your Concero Workspace via a secure wired or wireless connection. Four USB ports are available for your mouse, keyboard and two additional direct attached peripherals.

The devices are ultra secure. Users have no access to the underlying OS or applications and no files are saved directly to the device. Each device is monitored and managed remotely by Concero. Hardware replacements are shipped same day or kept on-site for larger deployments. The Micro HDX Device is only a few dollars extra as an add-on to your monthly Concero Workspace subscription.

### FEATURES

- Add-on to Concero Workspaces
